

Piramal Supports You

with Collaboration, Education & Convenient Products

When you choose Piramal Critical Care for intrathecal therapies, you get more than a product. You get a partner focused on the health and well-being of your patients and a multi-tiered team of Territory Managers and Key Account Managers committed to the success of your practice's spasticity and pain management goals. From the start, we take time to understand your goals and strategize with you on the best ways to achieve them. When it comes to intrathecal spasticity and pain management solutions, you'll experience collaboration, education and product improvement for your convenience.

COLLABORATIVE SUPPORT TEAM

Our collaborative and multi-tiered teams of Territory Managers (TMs), Key Account Managers (KAMs) and dedicated Customer Service provide physicians and clinicians with experienced and anytime support. With specialized skills in specific therapeutic areas, such as spasticity and pain management, our dedicated KAMs and TMs will provide customized support and in-service educational programs to meet your practice's specific needs. From your introduction to intrathecal therapies to hands-on training and support and refill maintenance, your practice and clinicians will have the tools and resources they need.

EDUCATION & AWARENESS

Our peer-to-peer educational speaker programs, collegiate roundtables and in-service presentations are just some of the many ways we increase awareness and foster open dialogue. Speaker programs provide a platform for Key Opinion Leaders to share best practices and educate, while our roundtables offer a forum for healthcare providers to engage with their peers and find answers to persisting questions. Additionally, our on-site support provides training to new physicians and reinforce behavior for tenured employees.

CONVENIENT PRODUCTS

Our products for the treatment of spasticity and pain* via intrathecal drug delivery are designed for efficacy and ease of use by physicians and clinicians. Focused foremost on your patient treatment needs, we actively seek opportunities to adapt and improve our intrathecal product line. Because we understand the potential handling issues associated with cracking ampules, we adapted the original product to the now available ready-to-use vials and syringes†. With our products, you'll benefit from optimal usability and convenience.

* Intrathecal and epidural delivery for pain

† Syringes only available for spasticity products
